Research Opportunity

Dear Professor,

My name is Anushka, and I am a first-year premed student studying Biology at the University of Texas at Austin. I recently came across your research on cardiovascular disease, and I found your work on patient outcomes and treatment methods very interesting.

I am writing to ask if there are any opportunities to get involved in your research lab this upcoming summer. I am eager to gain hands-on experience and learn more about the research process, and I am especially interested in how clinical research can improve patient care.

Although I am still early in my academic career, I am highly motivated and willing to learn. I would greatly appreciate any opportunity to assist with ongoing projects in your lab.

Thank you for your time and consideration.

Sincerely,
Anushka

LabLink

Research Opportunity

Dear Professor Johnson,

My name is Anushka, and I am a first-year Biology major on the premed track at the University of Texas at Austin. I recently read about your work in cancer immunotherapy, and I was particularly interested in your research on T-cell responses in tumor environments.

I am writing to inquire about any opportunities to contribute to your lab this upcoming summer. I am eager to gain hands-on research experience and develop a deeper understanding of how laboratory research translates to clinical applications.

I would greatly appreciate the opportunity to assist in any capacity and learn from your team. Thank you for your time and consideration.

Sincerely,
Anushka

Research !!

Dear Professor Lee,

My name is Anushka, and I am a first-year premed student studying Biology at UT Austin. I came across your research on neurodegenerative diseases, and I found your work on early detection methods for Alzheimer's disease especially compelling.

I am very interested in gaining research experience in neuroscience and was wondering if there might be any opportunities to get involved in your lab this summer. I am highly motivated and eager to learn, and I would be grateful for the chance to contribute in any way.

Thank you for your time, and I hope to hear from you.

Best regards,
Anushka

Research Please

Dear Professor Patel,

I hope you are doing well. My name is Anushka, and I am a first-year Biology student at UT Austin on the premed track.

I recently came across your work in genetics and was very interested in your research. I wanted to reach out to see if there might be any opportunities for undergraduate students to get involved in your lab.

I am eager to learn and would appreciate any opportunity to contribute.

Thank you for your time.

Sincerely,
Anushka

Research Please

Dear Professor,

My name is Anushka, and I am a first-year premed student at UT Austin. I am very interested in gaining research experience and was wondering if there are any opportunities available in your lab.

I am eager to learn and would appreciate any opportunity to get involved.

Thank you for your time.

Sincerely,
Anushka

INDIVIDUAL/DEPARTMENT TIER JUSTIFICATION

7.8.1.2 Authorized Purchase of Software for Low Risk Services

1. **Low Risk Procurements Only.** ProCard purchases to secure goods or services through use of a Clickwrap Agreement are acceptable only for very low risk procurements ("Low Risk Services") with a contract term not to exceed one (1) year and a total contract value less than $5,000. Use of the ProCard for Higher Risk Services as defined below is not permitted.
2. **Certain Requirements and Limitations for Technology**
3. **Critical Accessibility Requirements for Technology**. If Technology, Software, Software as a Service (SaaS), Web Service and/or Subscription-based software is secured under this policy and item is found not to be in compliance with accessibility requirements under Subchapter M, Chapter 2054, *Texas Government Code*, then an alternative accessibility option must be offered and approved by the University's *Electronic Information Accessibility Coordinator*. If an alternative method is not approved, then the department or college must cease use of the technology and promptly terminate the related contract.

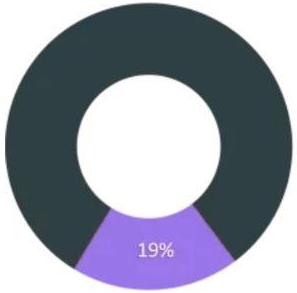

- We are considered **"low-risk"** under the UT Austin Handbook of Business Procedures since LabLink:
  - Is a standalone business (no information from FERPA)
  - Is not a required academic tool by the university
  - Does not need access to sensitive university information
  - Contains user-generated information, which means no university affiliated logos are in the architecture of our platform
- Since the pricing tiers are set at $500/yr and $4,500/yr, professors and PIs do not have to sign business contracts; they can just use a **quick "Clickwrap" agreement** to use their Procard and have it funded by the university

LabLink

UNIVERSITY-WIDE TIER JUSTIFICATION

19% - Grants and Contracts (Sponsored Projects)

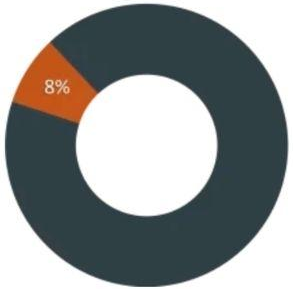

The university secures over $600 million a year in research grants and contracts, known as sponsored projects. In 2017, it secured a contract worth up to $1.1 billion to bolster national security efforts, ranking among the top research recipients.

- The University of Texas gets **19% of its revenue** from research initiatives
  - Means they are willing to spend more towards **streamlining research processses**
  - LabLink also protects this revenue stream by **sourcing high-quality applicants**
- These estimates are on-par with other research universities in the United States

8% - Academic and Research Resources & Reserves

Investment in academic and research priorities includes seed funding for new programs, equipment acquisitions, and enhanced library resources to maintain a competitive edge in education and innovation.

- UT's fourth largest expenditure category is **Academic and Research Resources**
  - 8% of $4.27 B is $341.6 M, meaning **LabLink would take up <0.01% of the budget** per year to optimize valuable assets
  - Saves faculty time, meaning more of the money spent could be towards actual research

LabLink

SWOT ANALYSIS

Strengths

- Niche: Purpose-built for academia with highly specific filters like lab techniques and coursework
- Matching: Standardized required skills and structured onboarding actively reduce application noise for professors and lower friction for students
- Proximity: Direct, on-the-ground access to early adopters by leveraging the founders' current status as university students

Threats

- Entrenched academic hiring behaviors, such as professors recruiting directly from their own classes or relying on graduate student word-of-mouth, are difficult to disrupt.
- Somewhat saturated market, job posting boards already exist

Opportunities

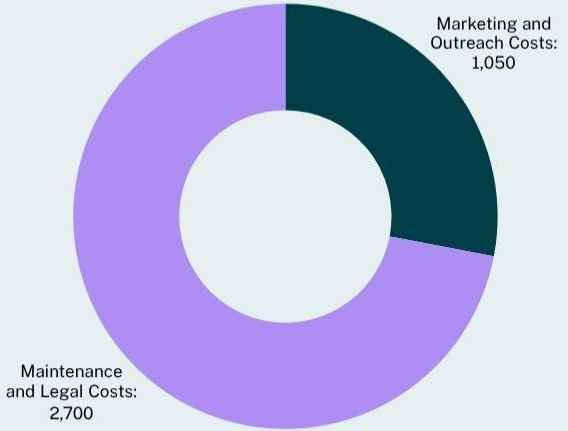

- Partnerships: Integration at the departmental or university level could establish the platform as an institutional standard and secure bulk funding
- Standalone value and saves professors hours of manual review
- Expansion: Proven success in one university's natural sciences department can easily be scaled to other massive research institutions and academic disciplines

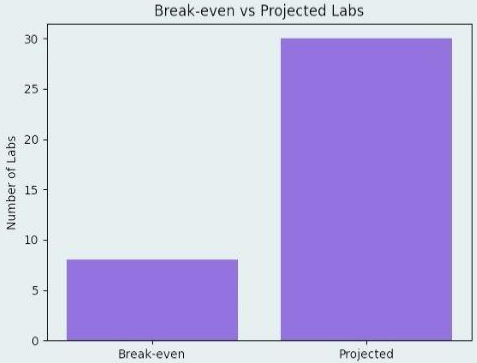

Weaknesses

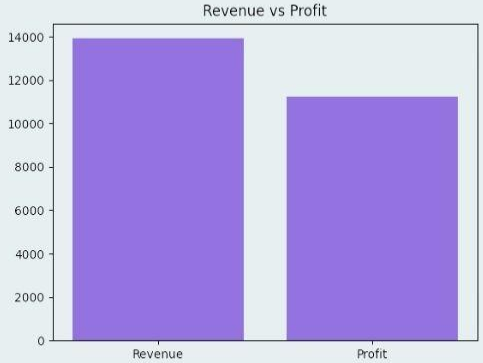

- Marketplace: Highly susceptible to the "cold start" problem, where both students and labs require the other to be actively present to stay engaged
- Friction: The thorough professor onboarding flow is potentially time-consuming and risks an abandonment rate

LabLink

BREAK EVEN ANALYSIS

Total Costs Excluding R&D:

- Marketing and Outreach Costs: $1,050
- Maintenance and Legal Costs: $2,700
- Total Cost in 2026: $3,750

Break Even Target: 8 Labs

- Projected Target for 2026: 30 Labs
- Projected 2026 Profit: $11,250

- Gross Profit per Lab: $464
- Overall Net Profit Margin: ~80%
